Questions

1. I like using GitHub because it is easy to navigate and see all our files in one place. When using my code editor (Webstorm), I can easily go to the GitHub desktop app to commit my changes. That is then automatically updated and the page updates once it's active!

   I like using cpanel hosting because it makes quick updates to the website. I can also edit the HTML code on the website and save it from there which is very cool.

2. The most satisfying part of this assignment was that I could create and write whatever I would and it would pop up on the internet. I never knew it was that easy to put something on the internet until I did this.
